

# STAIR TOWERS

Action scaffold provides both System scaffold and framed stair towers. Framed scaffold stair towers are designed for easy assembly and for basic access. System scaffold stair towers are modular and have larger customizable landings at each level to ensure safe access to each level.

# SYSTEM SCAFFOLD

System scaffold is a modular product with unlimited possibilities. System scaffold can be the solution to almost any access issue (tight spaces, mechanical rooms, hanging platforms, wide areas, pedestrian protection Etc.).

# OVERHEAD PROTECTION

Using frame or system scaffold components, our team can build temporary structures to protect pedestrians on city sidewalks or at building entrances, our equipment can be designed to accommodate existing site conditions, permit requirements and project specific details.

# TARPING

Our team can supply and install Tuff Tarps over existing scaffold structures to create temporary weather tight enclosures against extreme cold temperatures and unstable weather conditions during winter months. In addition, we offer a cable to tarp system which can be used to enclose elevations and /or floors during the construction process to isolate certain areas in order to stabilize the conditions and temperature.

# DEBRIS-CHUTES

Debris-Chutes offer a fast and easy way to dispose of waste material from job sites. It reduces time and labour, and increases your efficiency and site cleanliness. We have both the standard yellow plastic chutes, and customizable and durable plywood chute options to adapt to any of your needs.

# SHORING

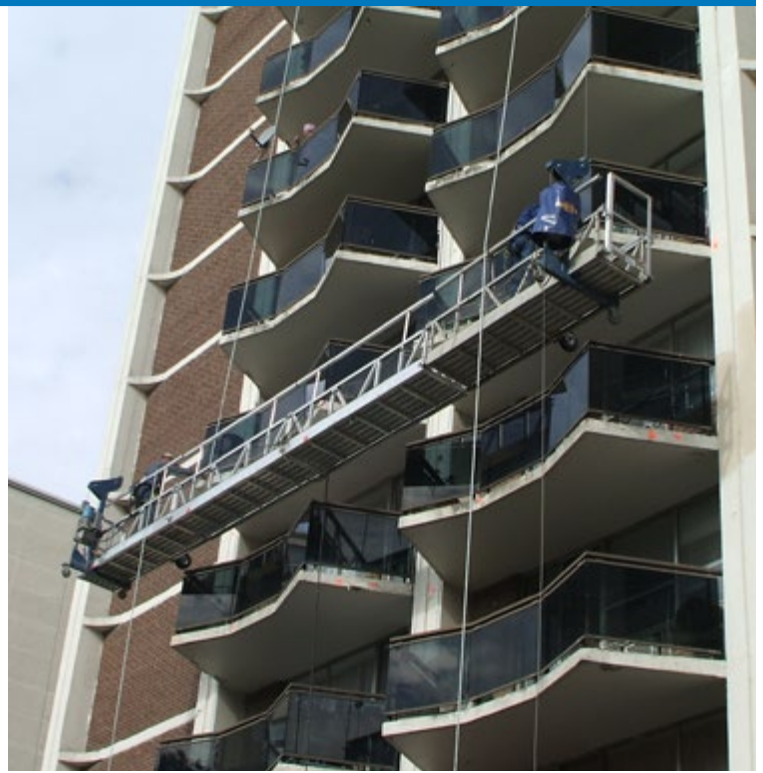

We provide a variety of engineered shoring solutions for any situation. Our large inventory of system scaffold, frame scaffold, standard post shores, and heavy duty post shores means that we have more options for shoring solutions, and can offer the safest and most economical setups.

# SWING STAGE

Swing Stages are the perfect solution for jobs that don't involve heavy equipment or material, need a high reach, and where scaffold isn't practical or cost effective due to a lower budget. We offer a variety of set-up options in order to access flat walled buildings, or extended out further to pass balconies. We can even build swing stages inside buildings and factories where access with scaffold isn't an effective option.

# TEMPORARY FENCE

Our Temporary fence panels are constructed of heavy pre-galvanized, polyester powder coated steel mesh panels, they are available in 42", 6' and 8' high x 8' Long. All panels are connected and fastened with double frame collar clip, ensuring security to the work site. Where necessary, a T- Post can be installed to reinforce the fence panel.
